Schools 2025

A comprehensive guide to the NCEA
results from 2023 for every high
school in Tāmaki Makaurau.

PRESENTED WITH THANKS TO

V O L V O

Every year when we present the results of Auckland's high schools, we are forced to ask ourselves the same question: what truly constitutes a 'good school'? Is its excellence defined by the highest NCEA attainments, or by its capacity to open doors to prestigious international universities? Does it excel in forging pathways to higher education, or does its value lie in cultivating a network of one-day-will-be-influential connections? Perhaps a school's virtue is found in its ability to nurture strong values, transforming young minds not into products ready for the market, but into valued contributors within their community, be that geographic, cultural or religious. Could it simply be the place where one's closest friends, or the children of friends, are educated? Or is it the institution renowned for its theatrical flair, its undefeated sports teams, its rigorous discipline, or its progressive, traditional or diverse ethos?

Ultimately, a single definition remains elusive. There is no one metric of 'good' and choosing a 'best' seems all but impossible. When students, and their parents, embark on the journey of secondary education, it's typically a nuanced blend of these multifaceted considerations that guides their choice. Even the most ambitious scholars seek a high school experience that transcends relentless examination preparation, just as future sports stars recognise the need for diverse skills beyond their dreamed-of careers.

It is precisely this complexity that shapes the scope of our analysis. While the full tapestry of what makes a school exceptional is rich and varied, the most objective and consistently measurable indicator of success lies in academic performance. It is with this understanding that we present here a comprehensive report detailing the NCEA results for Auckland high schools from the 2023 academic year, drawing from the most recent data fully reported by the Ministry of Education. In doing so, we acknowledge that this approach, while robust, captures only a segment of a school's true value, leaving many equally vital, yet harder-to-quantify, aspects to broader consideration. Further, it's important to note that while NCEA is still the primary school-leaving qualification in our country, enrolment in Cambridge and International Baccalaureate programmes is growing in Auckland. Schools that offer these qualification pathways may consequently have less impressive NCEA results than they might otherwise be capable of achieving.

But as we meticulously examine the 2023 NCEA outcomes for high schools across Tāmaki Makaurau, certain patterns emerge. The enduring truth that schools are not uniform in their capabilities is reinforced year after year, with a notable divergence in results often unfortunately mirroring the socioeconomic landscape of various areas. For many families, the luxury of choice regarding their child's education remains constrained; zoning regulations largely dictate attendance, with exceptions typically arising from religious affiliations, established family connections to specific institutions, or a student's exceptional talent that attracts scholarship opportunities.

It's also important to underscore that individual achievement can significantly deviate from school averages — remarkable results are often attained by students in schools with lower overall performance, while under-performance can (and frequently does) occur even within high-achieving environments. Academic metrics represent merely one dimension of a thriving educational journey; a truly commendable high school plays a crucial role in cultivating well-rounded individuals, a profound contribution that defies simple numerical tabulation.

And yet, we believe there is still value in that simple numerical tabulation. We think future and current students and parents (and teachers and administrators) should have access to the academic results of high schools across the city, to decide for themselves what value they have, and cross-compare them in whatever way suits their needs; that school assessment results should be open, transparent and available to all.

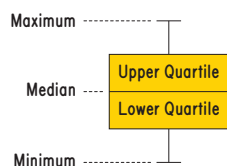

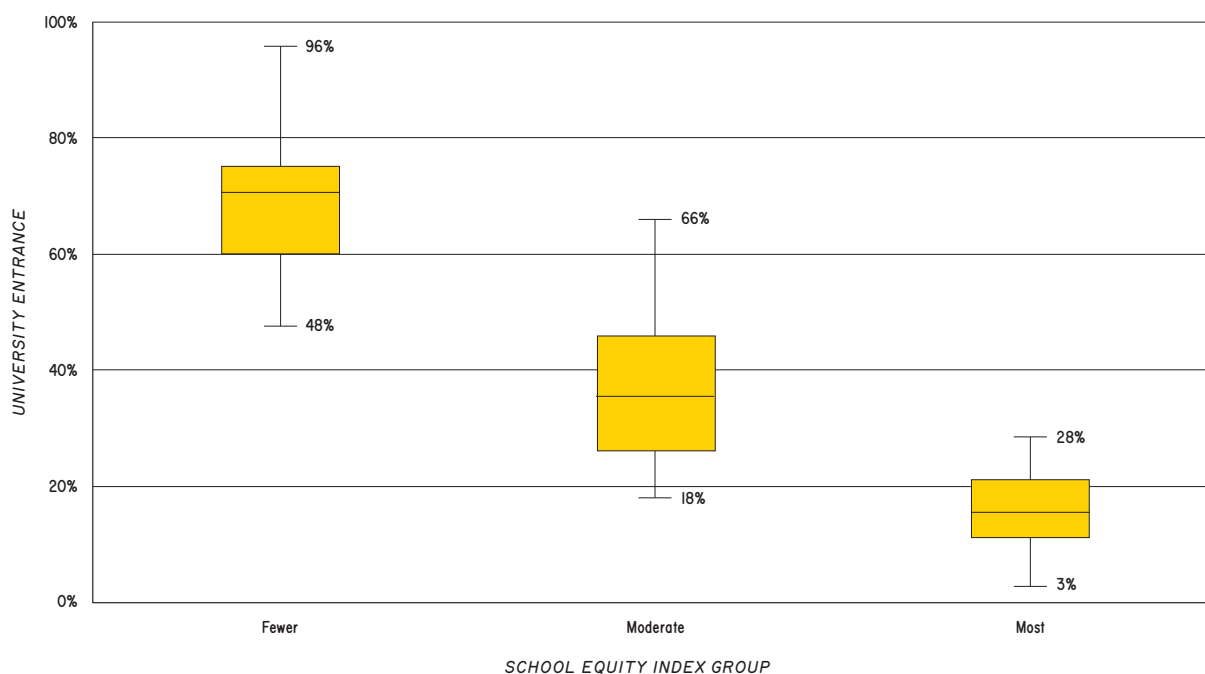

So here they are, Auckland's NCEA results for 2023 — A+ for some, 'needs improvement' for others.

THE IMPOSSIBLE CLIMB

(Socioeconomic Challenges)

Since removing the school decile system in January 2023, the Ministry of Education has distributed funding based on the Equity Index, which estimates the extent to which young people face socioeconomic barriers to achieving in education. In plain terms: the more socioeconomic barriers a school has, the lower level of University Entrance it has. Not only do the rich get richer, it seems that they get more opportunities too.

2023 UNIVERSITY ENTRANCE BY SCHOOL EQUITY INDEX GROUP

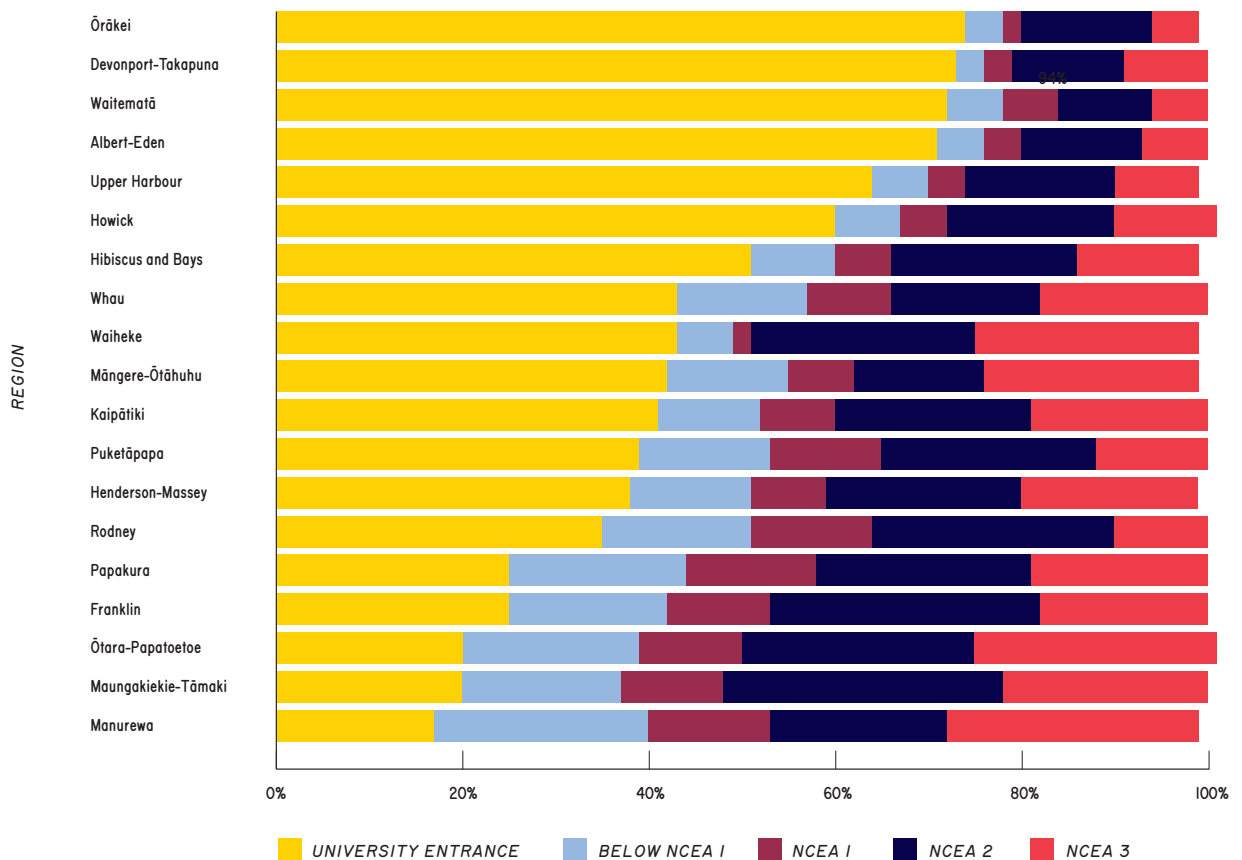

A NOTE ON BOXES WITH WHISKERS

The box and whisker plot is a graphical representation of data summarised by five key statistics: the minimum, first quartile (Q1), median, third quartile (Q3), and maximum. The box itself represents the interquartile range (IQR), which is the middle 50% of the data, with the median marked by a line within the box. That seems like a lot to take in — but the purpose is to highlight something we accept as obvious, but probably shouldn't. The more economic challenges our kids face, the harder it is to succeed.

LOCATION, *Location*, LOCATION

Urban areas have a higher percentage of University Entrance (50%) compared to rural areas (20% to 30%). There is also a correlation with areas with higher deprivation (South Auckland, Maungakiekie-Tāmaki, Rodney and Franklin) which have lower University Entrance rates.

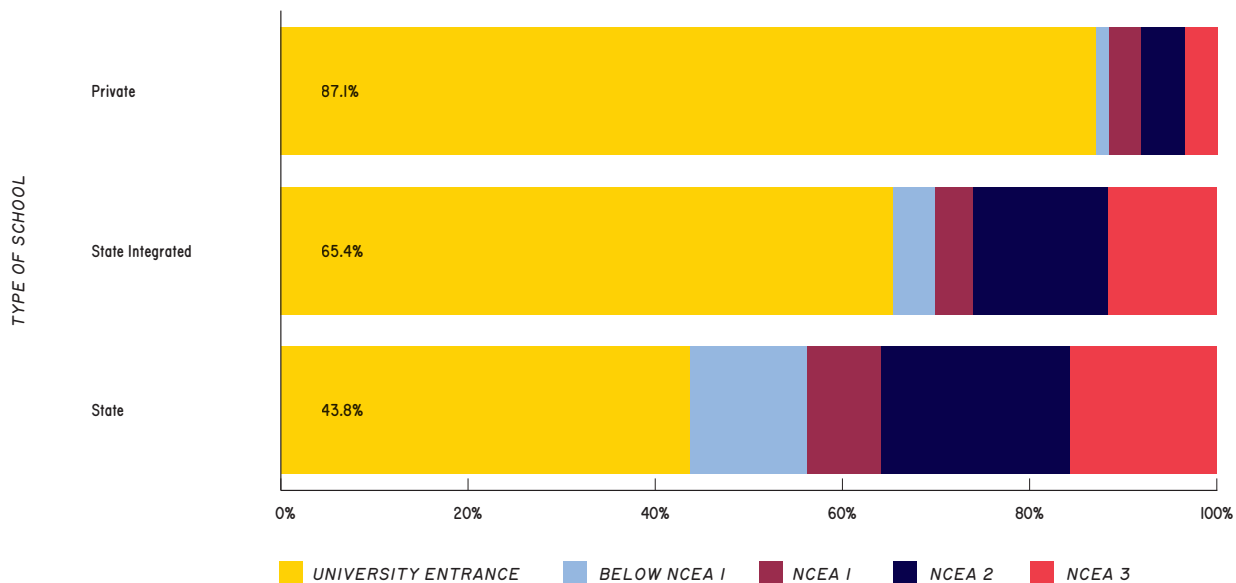

BREAKDOWN OF 2023 SCHOOL LEAVERS BY REGION

PUBLIC IN *Private*

The type of school matters, too. Year after year, we see that private schools perform better than public schools. You can read this two ways — that private schools are mostly populated by affluent students from well-resourced families. Or that if only they had comparable resources, our public schools could achieve comparable results. The truth probably lies somewhere in between.

The DATA, but now, **THE Methodology**

Some schools quantify the % of University Entrance achievement by the number of students who achieved University Entrance over the total number of students in Y13. The Ministry of Education methodology, which is the one we have used (for consistency purposes), quantifies this % as the number of students who achieved University Entrance over the total number of students considered leavers (this will include students who have moved overseas or students who left the education system, after achieving Level 1 or Level 2 NCEA, or before achieving those). We acknowledge that the numbers stated here may differ to those reported by individual organisations for this reason.

Student counts and achievements for NCEA Levels 1, 2 and 3 and University Entrance are based on the Statistics NZ Domestic Years 11–13 definition: Years 11–13 Domestic Students (aged less than 19 years on the 1st of January of the reporting year, enrolled at a secondary school).

Student counts and achievements for NCEA Levels 1, 2 and 3 and University Entrance uses typical Year Level: where the given qualification/requirement is of a level that the given year level students would typically be attempting to attain. (e.g. Year 11 attaining NCEA Level 1).

We have removed schools whose leavers number fewer than 20 or where the school size is lower than 100.

School leavers in 2023 are students who permanently left school to enter the workforce and/or undertake further education and training sometime between 1 March 2023 and the last day of February 2024 (inclusive).

School leavers are identified using ENROL. Students counted as school leavers are:

- Domestic students who were aged less than 19 in their first enrolment in ENROL; including alternative education students, students 15 or over before 1 March 2024 and students attending teen parent units
- Students with leave reason; 'end of schooling' or 'early leaving exemption'
- Students with leave reason 'transferred to another school in New Zealand' or 'transferred to home schooling' but did not reenrol in ENROL
- Students with leave reason 'gone overseas permanently', who meet the age criteria

Students who attend for a period of time at the start of 2024 but leave before 1 March 2024 are counted with 2023 leavers.

This excludes:

- Returning students (aged 19 or more) with a gap in their attendance
- Exchange students
- International fee-paying students
- Students who transferred to homeschooling or another school in New Zealand
- Deceased students
